USAF Dental Evaluation and Consultation Service

By Nicholas J. Miniotis, Col, USAF, DC

The Dental Investigation Service (DIS) has been part of the Air Force Dental Corps for almost 30 years, providing members of the dental community with free, easily accessible information on dental products. The mission at DIS has always been to offer tangible solutions to operational problems and provide advice to all personnel in the Federal dental services. To more accurately reflect this mission, DIS has changed its name to United States Air Force Dental Evaluation and Consultation Service (DECS).

DECS is currently located at the Naval Service Training Command, Great Lakes, Illinois, and shares facilities with the Naval Institute of Dental and Biomedical Research (NIDBR) and the Army Dental and Trauma Research Detachment (USADTRD), but remains a detachment of the USAF School of Aerospace Medicine (USAFSAM) at Brooks City-Base, Texas.

Although DIS physically moved in 2000, its web site server and web address remained at Brooks City-Base. This too, will soon change. DECS recently acquired a server at Great Lakes and when it becomes fully operational within the next few months, anyone visiting the current DECS web site, www.brooks.af.mil/dis, will be redirected to the new address. The DECS web site will continue to offer new dental and infection control product information; synopses on dental materials and equipment; and results from product evaluations. A 5-level rating scale for product evaluations ranging from unacceptable to outstanding plus a visual rating scale using 1 to 5 Air Force symbols was initiated in March 2005 for product evaluations.

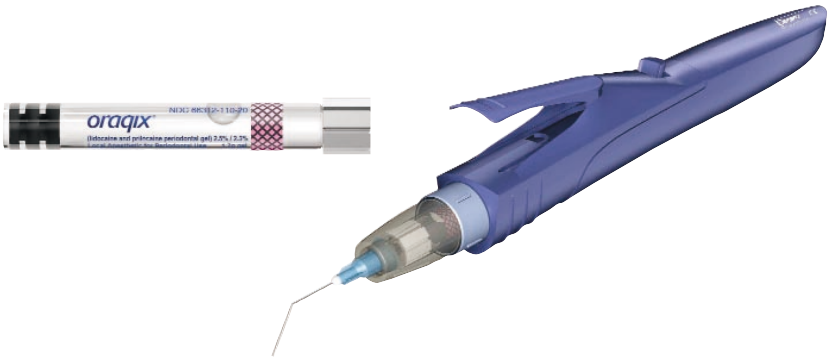
Dental infection control information; dental literature reviews; continuing education (CE) lectures; frequently asked questions; and readiness information are available on the web site. United States federal government personnel can obtain accredited CE hours through the American Dental Association CERT program, Academy of General Dentistry, or the Dental Assisting National Board by reviewing a lecture and completing a post-test. New information is posted monthly on the web site. The best way to stay abreast of new information is to sign up for the e-mail notification at webteam@nidbr.med.navy.mil.

Members of the United States Air Force Dental Evaluation and Consultation Service pictured above are Col Nicholas Miniotis, Col William Strampe, Col Greg Browning, Col Kraig Vandewalle, Lt Col Jennifer Harte, MSgt Sam Williams, MSgt TJ Young, MSgt David Sutter, Mr. Joseph LaForge, Walid Aly, and Cherrie Smith.

The DECS staff is dedicated to providing pertinent information on dental products and to make life simpler for all personnel working in the dental career field. If you can't find the information on our web site, contact us at DSN 792-7676 for answers to equipment, material, facility and infection control questions. Contact information (phone numbers, e-mail address) for DECS staff personnel can also be found on the DECS web site www.brooks.af.mil/dis. The DECS is committed to being the "Go To" information source for the Federal dental services.

DENTSPLY Pharmaceutical

Oraqix® (lidocaine and prilocaine periodontal gel) 2.5%/2.5% Needle-Free Anesthesia



Oraqix® (lidocaine and prilocaine periodontal gel) 2.5%/2.5% is a needle-free, dental local anesthesia approved for adults who require localized anesthesia in periodontal pockets during scaling and/or root planing. Oraqix is applied using the blunt-tipped Oraqix™ Dispenser, which dispenses the anesthetic as a liquid, then sets as a gel at body temperature. Oraqix has a 30 second onset, approximately 20 minute duration, and can be re-applied up to a maximum of five cartridges. The most common adverse reactions in clinical studies were application site reactions, headaches, and taste perversion.

The Oraqix Government Contract was granted to DENTSPLY Pharmaceutical on April 15, 2005. Oraqix pricing is as follows:

Oraqix® (lidocaine and prilocaine periodontal gel) 2.5% / 2.5%
Gov't Price: $65.66
(1.8 mL cartridges - 20 cartridges per box)
NDC 66312-110-20)

Oraqix™ Dispenser
Gov't Price: $25.59
(1 dispenser per box) Item #: 66400

For prescribing information, please visit our web site at www.oraqix.com. To place an order, contact your DENTSPLY Government representative or call DENTSPLY Pharmaceutical Customer Service at 1-800-225-2787.

Citanest® Plain and Forte DENTAL Anesthetics

When your customers need a fast-onset (1-2 minutes) anesthetic agent for short or intermediate procedures, DENTSPLY Pharmaceutical offers 4% Citanest® dental anesthetic.

In dental anesthesia, quality, performance, reliability and patient comfort matter. That's why DENTSPLY high performance dental cartridges, like 4% Citanest Plain DENTAL and 4% Citanest Forte DENTAL, undergo more than 200 quality assurance steps.

Further, Citanest dental anesthetic is available with no epinephrine (4% Citanest Plain) or half the epinephrine of the most commonly used anesthetic (lidocaine HCl with epinephrine 1:100,000).

4% Citanest Plain DENTAL

(prilocaine HCl Injection, USP)
Contains no epinephrine

4% Citanest Plain DENTAL provides a short pulpal duration anesthesia in the maxilla of approximately 10 minutes, and intermediate pulpal duration anesthesia in mandibular nerve blocks of 45-60 minutes without a vasoconstrictor.

Citanest Plain DENTAL also provides brief soft tissue anesthesia duration after infiltration of 2 to 2.25 hours and 2.5 to 3 hours after mandibular nerve blocks.

4% Citanest Forte DENTAL

(prilocaine and epinephrine Injection, USP) with epinephrine 1:200,000

4% Citanest Forte DENTAL provides an intermediate pulpal duration anesthesia in the maxilla of approximately 40 minutes, and intermediate pulpal duration anesthesia in mandibular nerve blocks of 50-70 minutes using low epinephrine, which is desirable for high risk patients.

Citanest Forte DENTAL also provides brief soft tissue anesthesia duration after infiltration of 2 to 2.25 hours and 2.5 to 3 hours after mandibular nerve blocks.

The cartridge design for 4% Citanest brand features a siliconized plunger for smooth movement and precise control. Cartridges are packaged in a unique blister tray to minimize the risk of breakage.

For more information contact your DENTSPLY Federal Government representative or call 1-800-225-2787.

New Pharmaceutical Oral Anesthetic Gels

DENTSPLY Pharmaceutical is pleased to announce the addition of its Cherry Fresh and Melon Fresh oral anesthetic gels to the current product line. The 20% Benzocaine water soluble, polyethylene glycol based gel is indicated for the following uses: temporary relief of occasional minor irritation and pain associated with minor dental procedures; minor irritation of the mouth and gums caused by dentures or orthodontic appliances; sore mouth, gum and throat; minor injury of the mouth and gums; canker sores or stomatitis. The easy-to-use oral anesthetic gel is packaged in 1 ounce jars.

Benzocaine Cherry Fresh
Gov't price: $56.96
(12 jars per case)
NDC 66312-862-31

Benzocaine Melon Fresh
Gov't price: $56.96
(12 jars per case)
NDC 66312-851-31

For more information contact your DENTSPLY Federal Government representative or call 1-800-225-2787.

Maillefer Offers New ProPex™ Apex Locator

Endodontists can now clearly and consistently map their working length with DENTSPLY Maillefer's new ProPex™ apex locator.

The key to the accuracy of the ProPex apex locator lies in its multi-frequency technology. Detailed graphics, combined with a progressive audio signal and pre-apical warning, provides the user a clear picture of his or her location in the canal, even with the presence of blood, tissue, NaOCl or other fluids.

Another advantage of the ProPex apex locator is its ease of use. Its design is compact and ergonomic, and its LCD screen is large, bright and angled upward for comfortable viewing. While in the median canal zone, the direction of the file's movement is reflected by arrows displayed on the screen. Entry into the pre-apical zone is indicated by a change in the appearance of the on-screen arrows and an audible alert of two beeps. From this point on in the procedure, the ProPex apex locator continues to support its on-screen graphics with audio indicators. In addition, a green light signals when a good connection is made with the measuring wire.

Other features include a single easy start button with no additional settings, adjustments or calibrations needed and a rechargeable NiMH battery power source monitored by an internal indicator, eliminating the need for frequent and inconvenient battery replacements. Accessories available include a replacement battery and charger, additional lip clips, file hooks, and measuring wire.

For more information contact your DENTSPLY Federal Government representative or call 1-800-924-7393.

New Lower Price for Cavitron® JET with SPS™ Technology

Equip your offices with leading ultrasonic technology by adding a Cavitron® JET 30K ultrasonic scaler. Utilizing the patented Sustained Performance System™ (SPS™), Cavitron units provide perfect harmony between patient comfort and clinical efficiency. Cavitron JET with SPS technology features extended low power range for subgingival scaling, increased power dial setting for quick removal of tenacious calculus using the foot control and an ergonomic handpiece that relieves cable drag and enables easier positioning.

For more information contact your DENTSPLY Federal Government representative or call 1-800-989-8825.

Price reduced! ~~$2,633.70~~ **Now: $2,499.99.**

Cavitron® JET with SPS™ is a complete system that combines all the features of Cavitron SPS and PROPHY-JET units. Contains: 1 Cavitron JET 30K unit with warranty card, air polishing nozzle, 1 bottle of PROPHY-JET® and JET-Fresh® prophy powders, foot control and instruction manual.

Maillefer Offers Comfort with its New Senseus™ FlexoFile® Endodontic File

DENTSPLY Maillefer introduces a new level of comfort in endodontic instrumentation with its new Senseus™ FlexoFile® endodontic file featuring an ergonomic, soft-grip handle.

The Senseus FlexoFile instrument's soft-textured silicone handle provides greater working comfort and improved tactile feedback by conforming to the curves of the operator's fingers. The handle's large radius enables a secure grip for improved torque and force transmission, while the file's x-ray-visible calibration rings promote greater accuracy and better diagnostics.

This flexible, stainless steel file features a non-cutting Batt® tip for added safety and a triangular core for extra strength. To save time and money, preinserted silicone stops are included with each file. The Senseus FlexoFile instrument is available in traditional ISO sizes 06 to 80 in 21 and 25mm lengths, and 06 to 45 in the 31mm length.

Senseus FlexoFile instruments are available in packages of six. For more information contact your DENTSPLY Federal Government representative or call 1-800-924-7393.

New Calamus™ Flow Obturation Delivery System

DENTSPLY Tulsa introduces its new Calamus™ Flow obturation delivery system.

Designed for ergonomic control and easy cleanup, the Calamus Flow system has a slender pen-like handpiece that provides tactile sensation, visibility and comfortable access to all areas of the mouth.

Lightly pressing and releasing any flat portion of the activation cuff around the hand piece allows a stop-and-start flow of gutta-percha into the canal. Buttons on the console easily control the temperature and flow rate of the gutta-percha, and an indicator window enables clinicians to easily monitor the amount of filling material loaded in the handpiece.

The system features disposable Calamus Singles gutta-percha cartridges, which make working with warm filling material neat and convenient. Simply drop the cartridge into the end of the handpiece and gently tighten the screw cap over the needle. Set the desired temperature flow rates on the console, and the system is ready to deliver material directly into the canal.

The cartridges are filled with gutta-percha specifically chosen for its flow characteristics and are available in 20 and 23 gauge sizes. Disposable cartridges leave no mess to clean out of the equipment.

Calamus Singles offer a number of benefits including: single use-design which reduces the risk of cross-contamination; a drop-in, drop-out design for easy loading; and an attached needle made of heat conductive silver alloy, allowing the bending tool to be curved as desired. The cartridges are loaded with enough filling material to fill four average-to-large canals.

For more information contact your DENTSPLY Federal Government representative or call 1-800-662-1202.

The Calamus Flow Obturation Delivery System includes:

- Console, handpiece
- Remote power cord
- 1-10 pack 20-gauge Calamus Singles
- 1-10 pack 23-gauge Calamus Singles
- Bending tool
- Cleaning brush
- Instructional DVD and manual
- Technique card
- DFU MSDS
- Extra cartridge nut

New BioPure™ MTAD™ Antibacterial Root Canal Cleanser

DENTSPLY Tulsa introduces its new irrigant BioPure™ MTAD™ antibacterial root canal cleanser.

BioPure MTAD antibacterial cleanser is an antimicrobial solution designed to chemically clean and disinfect the root canal system following endodontic instrumentation.

In root canal therapy, the main objectives are to remove bacteria from infected root canals, shape the canals, fill them in three dimensions and prevent re-infection. Current cleaning and shaping methods produce a "smear layer" of necrotic pulp tissue, dentinal shavings, vascular tissue and bacteria that cover the instrumented canal walls. Because of the smear layer's potential contamination, experts believe it should be removed to allow disinfection of the entire root canal system.

Studies have shown that today's standard disinfection products and procedures are inadequate. Irrigants like distilled water or sodium hypochlorite (NaOCl) leave the smear layer intact. EDTA removes the smear layer, but erodes the orifices of dentinal tubules in the process and has little to no antibacterial effect.

BioPure MTAD antibacterial cleanser has been proven to remove the bacteria-laden smear layer that obscures dentinal tubules and to kill enterococcus faecalis – the most resistant bacterial strain found in the root canal system.

Other benefits of BioPure MTAD antibacterial root canal cleanser over existing irrigation methods include its being more biocompatible than full strength NaOCl; improving the penetration of medicaments and sealers and; having an easy dispensing, disposable syringe.

BioPure MTAD antibacterial root canal cleanser is composed of liquid and powder components, which are mixed at the time of use. The 'MTAD' in the product name stands for 'a mixture of tetracycline isomer (doxycycline), acid (citric acid) and detergent (Tween 80).' The doxycycline disinfects the surfaces of the root canals, the citric acid removes inorganic materials from the canals, and the Tween 80 helps the solution to diffuse into canal irregularities and dentinal tubes.

For more information or to request a starter kit, contact your DENTSPLY Federal Government representative or call 1-800-662-1202.

NUPRO® revolv® Disposable Prophy Packs Offers Spin without Splatter

Save time with NUPRO® revolv® disposable prophy packs that include a latex-free, soft-cup prophy angle and splatter-free NUPRO® prophy paste in one convenient package.

The NUPRO revolv soft-cup prophy angle provides outstanding flare for even paste application and splatter control. NUPRO revolv is ergonomically designed with a wider back-end and dimple textured handle for easy grip.

Disposable prophy packs are available with five popular NUPRO prophy paste flavors including BubbleExtreme™, CherryBlast, Mint, Orange Vanilla Swirl, and Razzberry. Packs can be ordered in quantities of 100, 500 or 1000.

For more information or a free sample, contact your DENTSPLY Federal Government representative or call 1-800-989-8826.

New Midwest® Stylus™ Handpiece Compatible with KaVo MULTIflex® LUX Coupler!*

DENTSPLY Professional and Midwest, the most trusted names in dental handpieces, are proud to introduce the Midwest® Stylus™ high speed air driven handpiece.

Midwest Stylus, the handpiece that offers clinicians best-in-class performance, power, durability, light, noise level, maintenance options and ergonomics – just became even more versatile. The new Midwest Stylus Handpiece offers a special back for compatibility with KaVo MULTIflex® LUX couplers.

Because Midwest Stylus brand is now compatible with the MULTIflex LUX coupler, dental offices currently using KaVo air driven handpieces can integrate a Stylus handpiece into their existing rotation.

For more information contact your DENTSPLY Federal Government representative or call 1-800-989-8825.

*MULTIflex® LUX is a registered trademark of KaVo Corporation.

Midwest® Launches New DIAMONDS Line

Following the market success of Midwest® carbide burs, Midwest DIAMONDS now completes the Midwest bur portfolio. DENTSPLY Professional and DENTSPLY-ASH of the United Kingdom teamed up to offer dentists expanded clinical solutions in the growing U.S. diamond market.

Midwest DIAMONDS incorporate the latest advances in computer-aided design and manufacturing processes to produce a superior diamond bur. Featuring one-piece stainless steel shanks, Midwest DIAMONDS are made on high tech machinery, producing concentricity that exceeds industry standards. With the addition of diamonds, Midwest offers over 500 items in its line. DIAMONDS are available in a variety of shapes, diameters, head lengths, and grits.

For more information contact your DENTSPLY Federal Government representative or call 1-800-989-8825.

Midwest DIAMONDS are available in (l to r) round, flame, football contour, inverted double cone and many more popular shapes.

Caulk Adds New SmartLite® PS LED Curing Unit to Line

DENTSPLY CAULK has just added the SmartLite® PS LED curing light to its line. The SmartLite PS curing light features a pen-style design that is light weight – 110 grams total – and provides a freely adjustable LED tip which rotates 360 degrees for easy access in the oral environment.

The five watt LED placed at the tip delivers high light intensity of 950mW/cm2 when measured with a Cure Rite® unit. The highly efficient LED emission spectrum matches camphorquinone, the leading photo initiator in light cured dental materials. The absence of a fan enables the SmartLite unit to run almost silently. The simple 'on/off' control activates the standard 10-second curing cycle and an audible signal sounds at the completion of the cycle. The advanced battery technology offers an operating time of up to 150 ten-second cures on a full charge. The charging unit plugs directly into the wall outlet economizing counter space, a critical issue in many of today's operatories.

For more information contact your DENTSPLY Federal Government representative or call 1-800-532-2855.

Caulk Introduces New XENO® IV Light Cured Self-Etching Dental Adhesive

One bottle, one brush. It's just that simple. DENTSPLY Caulk introduces this exciting new self-etch product, based on the market leading formulation of the Prime&Bond®NT™ bonding system. Designed with the clinician in mind, XENO® IV adhesive provides etching, priming and bonding in a single component. It is less technique sensitive than total etch systems with no over-drying or over-etching of the dentin. XENO IV adhesive has high resin concentration which offers high bond strengths to dentin and enamel. It provides superb sealing ability including smear layer and dentinal tubules, and minimal post operative sensitivity. XENO IV brand is available in both bottle and unit dose delivery.

For more information contact your DENTSPLY Federal Government representative or call 1-800-532-2855.

Caulk introduces TPH®3 Micro Matrix Restorative to replace TPH

DENTPSLY Caulk is pleased to offer TPH®3 micro matrix restorative replacing all Prisma® TPH® and TPH® Spectrum® products. TPH3 restorative features DENTSPLY Caulk's exclusive micro-matrix application of nanotechnology which gives the new restorative superior handling properties over the original TPH formula. Clinical user studies have yielded overwhelming positive feedback for TPH3. Participants in the clinical study rate TPH3 brand as having superior handling capabilities with less tackiness and surprising sculptability when compared to the previous generation of TPH products. Participants reported that TPH3 restorative offers a long working time, is directionally easy to control and feathers into margins effortlessly. The study showed that the shading system remained clinically unchanged, and that a single shade could create life-like restorations with no change in polishing technique required.

TPH3 restorative offers 3 unique benefits:

1. Creamy handing. TPH3 restorative features less tackiness than the original TPH formula, a long working time and incredible adaptability.

2. Remarkable color reproduction. Color reproduction is achieved through the proprietary blend of fillers and a patented resin matrix that allow TPH3 restorative to absorb color from the surrounding tooth structure. TPH3 restorative yields enamel-like luster, opalescence and reflectivity.

3. Easy-to-use shading system. A simple Vita-based shading system features 26 shades and a shade guide made from TPH3 restorative material that allows easy shade determination and predictability.

For more information contact your DENTSPLY Federal Government representative or call 1-800-532-2855.
